

Appendix C – Application for Spring 2007 Award

The awards will be denominated as 2007 NO_x allowances.

The initial round of awards will be made only to applicants who can demonstrate that their projects reduced NO_x emissions during the 2006 Summer Ozone Season (May 1- September 30, 2006). Other requirements are included in Section 1 "Project Eligibility."

The deadline to submit the application is November 30, 2006. However, there are several steps that the applicant should take prior to November 30.

- (1) The applicant must establish an authorized account representative (AAR) so that the AAR can submit the application form to DNR. To establish the AAR, the applicant must submit a request to the U.S. Environmental Protection Agency (EPA). A Web link to the EPA form used to submit this request is in Appendix F.
- (2) Applicants who expect to collect data during the 2006 Summer Ozone Season and include it in their application should contact the DNR Energy Center prior to the ozone season to review plans for measuring and verifying the data.
- (3) DNR also strongly encourages potential applicants to request an early review of eligibility nine months prior to November 30. The form to request an early review is in Appendix B.

The Missouri Department of Natural Resources will issue application forms to apply for subsequent award years. This will be similar to the form included here; however, DNR reserves the right to modify the form as needed.
